

(a) Original test

Cross-patient
Spearman $\rho = -0.026$
 $p = 0.651$

Verdict: FAIL
(confounding by indication)

(b) Test A: partial corr.

Partial correlation
 $\rho_{\text{partial}} = 0.180$
 $p = 3.4\text{e-}30$

Verdict: PASS
(LEDD correlates with residuals)

(c) Test C: ΔAIC

Model comparison
 $\Delta\text{AIC} = 104.1$
 $\Delta R^2 = 0.0260$

Verdict: PASS
(N(t)+LEDD model wins)

(d) H1 Hill model

H1 Hill coupled model
 $\Delta\text{AIC}(\text{coupled vs N-only})$
 $= +258.3$

Verdict: FAIL
(N(t)-only wins; Hill in sub-EC₅₀)
